

Welcome!

Thank you for signing up for my course. A few things I want to point out before you jump in:

Distorting Videos

- It appears some of the videos may distort, mostly when I switch from a PowerPoint to another software program. In order to correct this, you will need to pause the lecture and toggle between the quality setting (this is a gear icon at the bottom right portion of the screen) you can change the resolution from 720p to 1080p. Note: if you have your resolution set to 1080p you still might run into distorting issues, so if this happens, just pause and toggle the quality until you are able to watch the video without any distorting. I apologize for having to do this, [Udemy Support](#) has suggested this is the only option as of now to fix the picture quality (this appears to be a bug).

FPGA Board

- I am very interested in knowing which FPGA board you will be using for this course. If you could start a discussion explaining where you are from and which board you are using, I'd appreciate that.

Questions

- If you have any questions at all, don't hesitate to message me. I will typically try and respond within 24 hours

LinkedIn

- Connect with me on [LinkedIn](#)

Suggestions

- I would suggest to take a look at the end of the course, and download the notes slides. This will help you follow along during the video lectures.

Feedback

- I am always interested hearing your opinions – good and bad – please let me know your thoughts! Let me know what you enjoyed, and what didn't meet your expectations. I look forward to hearing from you.

Thanks again for taking interest in my course, I will do my best to accommodate all your needs.
